

Here are **20 MySQL Project Questions** that cover almost all-important MySQL concepts, including DDL, DML, Joins, Functions, Subqueries, Views, Indexes, Procedures, Triggers, and Aggregations.

### **1. Database Creation**

Create a database named Netflix Project and a table named Netflix Data with appropriate data types.

### **2. Data Exploration**

Display all records from the Netflix Data table.

### **3. Count Records**

Find the total number of movies and TV shows available.

### **4. Distinct Ratings**

List all unique ratings available in the dataset.

### **5. Movies Released After 2020**

Retrieve all movies released after the year 2020.

### **6. Top 10 Longest Movies**

Display the top 10 movies with the highest duration.

### **7. Count Content by Country**

Find the number of titles available from each country.

### **8. Most Common Rating**

Determine the most frequently used rating in the dataset.

### **9. Movies from India**

List all movies produced in India.

### **10. TV Shows with More Than One Season**

Display all TV shows that have more than one season.

### **11. Year-wise Content Release**

Find the number of titles released each year.

### **12. Category Analysis**

Count how many titles belong to each category in the listed in column.

### **13. Director-wise Analysis**

Find the top 10 directors with the highest number of titles.

#### **14. Average Movie Duration**

Calculate the average duration of movies.

#### **15. Movies and TV Shows Ratio**

Find the percentage of Movies and TV Shows in the dataset.

#### **16. Subquery Challenge**

Find movies whose duration is greater than the average movie duration.

#### **17. Create a View**

Create a view named Indian\_Content containing all content from India.

```
CREATE VIEW Indian_Content AS
```

```
SELECT *
```

```
FROM Netflix_Data
```

```
WHERE country = 'India';
```

#### **18. Stored Procedure**

Create a stored procedure that returns all content based on a given country.

#### **19. CTE**

find directors who have directed more titles than the average number of titles directed by all directors.

#### **20. Advanced Business Question**

Find the top 5 countries producing the most content and display their percentage contribution to the total content.

---

#### **Bonus Advanced Questions (For Interview Preparation)**

- Find the oldest movie in the dataset.
- Rank directors based on the number of titles they directed.
- Find content added in the last 30 days.
- Create an index on the country column and compare query performance.
- Use CTEs to find the top-rated content by country.
- Find duplicate records and remove them.

- Create a report showing Movies vs TV Shows by year.
- Use Window Functions (RANK(), DENSE\_RANK(), ROW\_NUMBER()) on release years.
